

MISSION & CORE VALUES

Our mission:

“We provide useful and unique content for our customers.”

At TOP we develop food products and ingredients that are healthier, fresher and tastier, with optimal preservation of original nutrients. We take into account the modern society in which ‘convenience’ is – and will remain – an important factor. Our focus is on fruit and vegetables, fish- and meat products and meat substitutes.

These food products and ingredients can be manufactured industrially and sold through professional channels. We develop the necessary sustainable machines and production lines, and assist in factory expansions and new constructions.

Modern food products also need to be safe and have a sufficient shelf life, preventing excessive food waste in the chain. That is why we are specialized in new preservation technologies based not on chemistry but on physics.

We support our customers in the development of new and disruptive technologies and new food products through applied innovation management. This concerns development of strategic partnerships, project financing, creating the right conditions and legal context.

MISSION & CORE VALUES

We put our mission into practice through three strategy lines:

- 1 Extend the shelf life of short-shelf-life fresh products by applying new technologies, thus preventing food waste in the chain.
- 2 Less intensive treatment of long-shelf-life products by applying new sterilization technologies, making them tastier and healthier.
- 3 Upgrade waste streams of industrial manufacturers and processors through new technologies into food products or ingredients.

“Our mission revolves around the skill of ‘designing’. Our core values in this are:”

Customer sensitivity

Focus on our goal

DESIGN

Excellent quality

Useful and unique content
